PREFACE

Dear colleagues

Vascular micro-anastomosis is an essential technique for the surgical management of cerebrovascular disease, especially those complex vascular situations.

The opportunity to learn this, however, may be limited in some occasions. To provide easy access to the practice of such procedures, this hands-on course had been initiated.

During this workshop, the attendees will learn the practical aspects of EC-IC (extracranial-intracranial) bypass surgery. Lectures are organized to focus on the technical points of various anastomosis, and practice with diverse materials will be provided. Invited speakers, Rokuya Tanikawa, from Japan and Ying Mao, from China, are real masters in cerebrovascular bypass surgery, and will share their distinguished experiences with the participants.

Thank you in advance for your participation and look forward to seeing you in Korea.
